

DRILL-LUBE HE

HIGH-EFFICIENCY LUBRICANT

PRODUCT DESCRIPTION

DRILL-LUBE HE is the next generation of oilfield drilling lubricants, designed to be used at ultra-low concentrations. Composed of highly active film-forming lubricants and surfactants, DRILL-LUBE HE increases ROP and reduces torque in extended reach laterals at concentrations as low as 0.5% by volume.

Specifically designed for use in low to high brine water-based drilling fluids and tolerant of very high hardness. It is compatible with most water-based mud systems and other synthetic oils that may be present or added to the mud system.

Treatment levels range from 0.5 – 1.5% by volume in the mud system, while pills typically contain 1.5 – 2.5%, depending on the degree of problems encountered. As always, pilot testing is recommended prior to field applications.

PRIMARY APPLICATIONS

- ✓ Highest potency lubricant on the market.
- ✓ Significant reduction in product usage.
- ✓ Low to no hydrocarbon content.
- ✓ Concentrated formula.

PHYSICAL PROPERTIES

- ✓ Appearance: Brown liquid
- ✓ pH @ 10% in water: 6.5 - 8.5

PACKAGING

- ✓ DRILL-LUBE HE comes in 330-gallon poly totes

Houston, Midland, Stockdale, Texas | Enid, Oklahoma | Lafayette, Louisiana |
Minot, Williston, North Dakota | Casper, Wyoming
